RTC-X580

580 LUMEN LED FLASHLIGHT

Rexford T·O·O·L·S

The RTC-X580 uses CREE's cutting edge XM-L T6 LED to produce an amazing 580 Lumen output from something that fits comfortably in your hand. With four different LED output modes, you will be sure to have just the right amount of light. The unit's Power Management System offers for a smooth and even brightness over the duration of battery life. On the lowest LED output mode, the RTC-X580 will operate with a 100 Lumen output for over 8 hours before needing to change or charge the batteries.

The RTC-X580 is truly a work of art. The blue anodized copper heat sink not only gives a brilliant look to the flashlight, it also dissipates heat to protect the LED and internal electronic components. The flashlight's knurled body is the perfect shape and size for an extremely comfortable grip. The Stainless Steel Strike Bezel on the flashlight's head along with the protective surround on the tail cap protect the light from hard drops and other impacts.

Rexford Tools new flashlight comes in a foam lined hard case with a selection of different accessories. Among these accessories is an extension tube which allows for the addition of another battery to increase the overall run time of the flashlight. Also included is an anti-rolling retaining ring that can be swapped out with the default retaining ring that comes pre-installed on the flashlight. The package contains several other very useful accessories along with some replaceable parts such as O-Rings and a Button.

FEATURES

A blazing output level of 580 lumens

4 different output modes including High, Medium, Low, and Beacon

Stainless Steel strike bezel & tail surround protect against drops

Optional extension tube allows for a third battery for longer runtime

Compact size fits comfortably in one hand
