

RTC-CM04

RTC-CM08

Coaxial Cable Mapper

Anyone who deals with coaxial cable on a daily basis knows how time consuming unlabeled cables can be. Rexford Tools coaxial cable mapper solves the issue of unlabeled cables!

This handy coaxial cable mapping device allows you to test and identify up to eight cables with just a single trip to the junction box or headend! You will wonder how you ever did without it!

Available in two different sizes, Rexford Tools coaxial cable mapper is simple to operate! Install the included F-Type Identifiers on up to eight cables or wall plates. Go to the junction box or headend where the other end of all the cables are located, connect the cable, and push the button. It is that easy! The Readout on the RTC-CM08 Coaxial Cable Mapper will display the number associated with the Identifier at the other end.

Also included with the RTC-CM04 and RTC-CM08 is a custom cordura carrying case with foam insert. This case features a metal belt clip for carrying the kit on your tool belt or pocket.

FEATURES

Map up to eight coaxial cable drops in a single trip

Perfect for Cable TV, Satellite TV, and CCTV Installers

Eliminates the headache of unlabeled coaxial cables

Simple one button operation makes mapping a breeze

Operates on two easily accessible CR2032 batteries (included)

Includes a rugged cordura carrying case with metal belt clip

Field replaceable F-Connector ensures long term use

Cable test feature tests for both Opens and Shorts
