Coaxial Cable Stripper Instructions

**STEP 1:** Set the orange V-block to the proper wire size by removing it, and re-installing it with the correct size.

**STEP 2:** Install the cable so that it is flush with the orange wire insert.

**STEP 3:** Spin the stripper three times clockwise and then three times counter-clockwise.

**STEP 4:** Remove the cable from the stripper. Blade depths can be adjusted with the Allen screws on the bottom of the unit.

**STEP 5:** It is recommended you pull off the coaxial cable remnants with your fingers to extend the life of your stripper blades.

**STEP 6:** Fold back the braid so that your cable looks like the one pictured above. You are now ready to install your connector.
